### Valuable Information For Prospectors.

BURNESHE great majority of men engaged in pros-pecting for the metals feel the want of a knowledge of Mineralogy, As-saying, and Economic Geology, and many who have followed the busi

ness for years without being successful believe that if they had possessed this information the result would have been different. Heretofore there has been no way for working men to obtain this knowledge because they have not the means to attend the regular, mining schools or are deficient in the education to qualfy them to enter such institutions. These difficulties are overcome by the Mathewale of the Correspondence School Methods of the Correspondence School of Mines, Scranton, Pa. It instructs in all the branches relating to mining and has met with such profound success that at present over 1,000 pupils are upon its rolls. The Prospecting Course includes Mineralogy, Assaying, Economic Geol-ogy, and Prospecting. The system of instruction is thorough and practical. Students study at home and lose no time from work. To enter, students only need to know how to read and write. Tuition charges within reach of all. Send for free Circular giving full particulars.
